

OASE AquaActiv PumpClean

Clean pumps, quartz glasses & Co.

Filter and watercourse pumps as well as fountain pumps are true long-time runners. Therefore, from time to time, thorough care and cleaning are important to remove dirt and limescale deposits.

With the OASE AquaActiv care program, OASE offers quick solutions for each application: To support of the sensitive pond biology, to improve the water quality, to prevent it from algae or to disinfect fountains and architectural basins.

OASE now launches the pump cleaner OASE AquaActiv PumpClean in the category disinfection (D) – an effective cleaner, which works without chlorine or vinegar and cleans quickly and reliably on the basis of citric acid.

The application is very simple: 500 ml AquaActiv PumpClean are mixed in a 10-liter bucket with 9500 ml water. Besides pumps, UVC quartz glasses, housings, rotors and sieves of the ProfiClear Premium drum filter can also be cleaned in the mixed liquid. After 24 hours residence time, limescale and other deposits have dissolved. Afterwards, the cleaned products just have to be washed with plenty of clear water and are fully operational again. (OASE)
